# **Selected Projects**

- Adaptive RPython. This project lets the RPython framework do an adaptive compilation, which can select an appropriate compilation strategy depending on a runtime situation.
- Poly2Kanon. Kanon is a live programming environment that can visualize data structures while editing code. Poly2Kanon aims to extend Kanon to support multi-language and multi-environment features.
- 2019-2020 RacCaml. It is a simple meta-tracing compiler framework, which can perform trace- and method-based compilations. It implements RPython-like tracing compilation by extending the MinCaml compiler.
